Version: 14 May, 2021

Panasonic i-PRO Sensing Solutions Co., Ltd.

## **CONTENTS**

Important Notes 2
To use Seagate, WD (5TB or 6TB) HDD with HDD canister
HDD Compatibility Chart10
SSC setting procedure15
Recorder Maintenance Guide 20

Caution: To use Seagate, WD (5TB or 6TB) HDD with HDD canister

for WJ-NX400K/WJ-HXE400/WJ-ND400K/WJ-HDE400/WJ-HD716K/WJ-HD616K

Please DO NOT fix two screws into bottom side of HDD (  $\Rightarrow$  marks below), because screw length is longer than depth of tapped hole.

#### **Important information: The preparations to use Seagate HDD**

(For WJ-NX400K/WJ-HXE400/WJ-ND400K/WJ-HDE400/WJ-HD716K/WJ-HD616K)

To use Seagate HDD, the following 2 items must be performed before the installation of HDDs.

1. Turn off SSC (SSC: Spread Spectrum Clocking, default setting: "ON")

**Caution**: If SSC is NOT turned off, the disk will never be recognized by NVR.

- ⇒ See Next Page
- Choose the screw to use

Caution: If do not install the correct screws, the HDD will not be properly secured to the case, and may experience HDD errors or malfunction.

The screws to install the HDD depend on the serial number of the NVR.

⇒ See Page 5

#### **Caution:**

We will not take responsibility for any failure that occurs by performing an operation different from the detailed procedure from the next pages.

#### The preparations to use Seagate HDD

- 1) The items and procedure to turn off SSC
- ◆ The required items
  - Windows PC with "SeaChest utilities" \*1
  - USB to SATA conversion adapter for 3.5 inch HDD with AC power input
     Note: Adapter with special functions such as clone function cannot be used.
  - HDDs to be changed

\*1: the download site of "SeaChest Utilities"

https://www.seagate.com/support/software/seachest/

◆ Procedure to turn off SSC setting

Described on page 15 to 19

⇒ See Page 15

#### The preparations to use Seagate HDD

2) Choose the screws

◆ The screws to install the HDD differ depending on the serial No. of the NVR.

Ex.) Serial No. : TLV00001

 $(1^{st} \text{ character = year}(T:2020), 2^{nd} \text{ character = month}(L:Dec)$ 

	Serial No(example)												
1st character	year	R	S	Т	U	V	W	Х	Υ	Α	В	С	D
		2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
2nd character	month	Α	В	С	D	Е	F	G	Н	I	J	K	L
		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

[ Case 1 ] : Serial No. is TLxxxxxx or later

(1st character T=2020, 2nd character L=Dec)

 $\Rightarrow$  See page 6 to 7

【 Case 2 】: Serial No. is TKxxxxxx or earlier

(1st character T=2020, 2nd character K=Nov)

 $\Rightarrow$  See page 8 to 9

	Seagate **	ST6000VX001	ОК	** To use Seagate HDD, it is necessary to set the HDD SSC setting to "OFF" in advance. And need to choose the screws to install the HDDs.  Please refer to page 3 for instructions.

1. Download SeaChest Utilities from the following URL then install it to Windows PC.

https://www.seagate.com/support/software/seachest/

2. Connect target HDD via USB to the PC which SeaChest Utilities is installed.

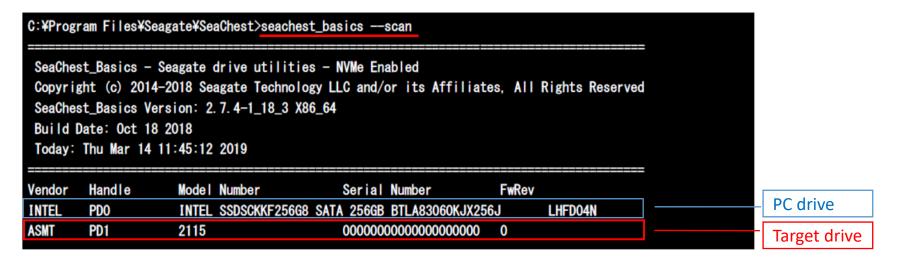

3. Double click SeaChest Utilities icon on desktop and launch SeaChest Utilities.

4. Enter the following command from Windows Command Prompt.

seachest\_basics --scan

Seagate Model# won't be displayed because HDD is connected via USB bridge chip. Check ID# (PD1 for above case) of target drive.

5. Confirm the current SSC condition by entering the following command.

seachest configure -d PD1 --ssc info

```
C:\Program Files\Seagate\SeaChest\seachest_configure -d PD1 --ssc info
 SeaChest_Configure - Seagate drive utilities - NVMe Enabled
 Copyright (c) 2014-2018 Seagate Technology LLC and/or its Affiliates, All Rights Reserved
 SeaChest_Configure Version: 1.12.2-1_18_3 X86_64
 Build Date: Oct 18 2018
 Today: Thu Mar 14 11:53:36 2019
¥¥. ¥PhysicalDrive1 - 2115 - 000000000000000000 - ATA
SSC Feature is set to the drive's default value
```

default value: SSC Feature is enabled (SSC is "ON")

6. Turn off SSC by entering the following command.

seachest\_configure -d PD1 --ssc disable

Power cycle the drive to make the change take effect. (No need to close SeaChest Utilities during power cycle)

7. Confirm SSC setting had been changed by entering the following command.

seachest\_configure -d PD1 --ssc info

8. Power off USB-SATA converter and then remove the HDD from the converter.

#### Introduction

As network disk recorders used for security system generally operate all-year-round, they need regular maintenance to avoid system failures and to keep their performance.

#### What is a hard disk drive?

What is a hard disk drive?

- A hard disk drive (an HDD) is a device which reads and writes digital data magnetically with the disks (platters) that spin and the head floating above the disks.

#### Points to Note

#### Point # 1 Avoid Vibration

The magnetic head floating above the disks in an HDD is set extremely close to the disks with the spacing that even cigarette smoke or flu virus cannot go through. Therefore, vibration can cause head crash and generate tiny dust if the head gets out of correct position. This results in creating fatal scratches in an HDD. Please install your recorder in a stable place away from declination, vibration or physical impact. Also, as an impact of sound (sound pressure) such as the radiation sound from gas distinguishing agent system can affect the speed of data transfer on HDDs, please install your recorder in the place without loud noise.

# HDD = Precision Device cigarette smoke 0.1-0.5µm 0.02-0.1µm head disk

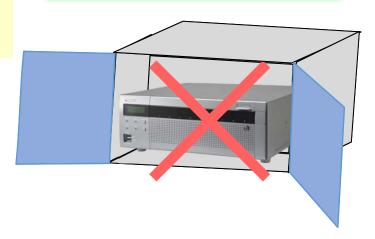

0.015-0.025µm

#### Point # 2 Keep Your Recorder from Getting Hot

Keeping HDDs exposed to high temperature results in the deterioration of its head and disks, and it can shorten the HDD life as well. Please consider ventilation when installing. The ambient operating temperature is 5 degrees Celsius to 45 degrees Celsius (the recommended temperature is 25 degrees Celsius).

# Consider Ventilation When Installing

#### Point # 3 Avoid Static Electricity and Condensation

Static electricity can be the cause of electronic parts failure in an HDD.

Condensation can cause a malfunction of a recorder as the head sticks to the disk due to the water.

Condensation occurs;

- when relocating the recorder to a place with sudden change in temperature and humidity.
- in the room just after heated.
- when the recorder is relocated from the cooled place to the heated place with high humidity.

## Prevent Static Electricity and Condensation

#### Regular Maintenance is Necessary for a Network Disk Recorder

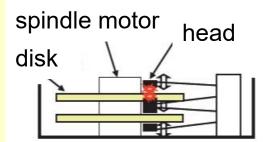

As a network disk recorder has HDDs for data storage, regular maintenance is necessary to use the recorder under its optimal conditions.

#### The Major Causes of Network Disk Recorder Failure

The Major causes of network disk recorder failure results from HDD malfunctions as below.

- a. The head crashes on the disk due to vibration or impact on the recorder and that creates scratches on the disk.
- b. Operating your recorder in high temperature environment causes the incorrect spacing between the head and the disks and that causes a head crush and creates scratches on the disk.
- c. Non-proper spin of the motor and the deterioration of the head's characteristics occur due to the long term use of HDDs. These can cause the write/ read error. The scratches on the disk gets larger in several months and causes a recorder failure.

#### Cutaway of an HDD

#### Tips for the Stable Operation of Your Network Disk Recorder

As the parts in a disk recorder are consumable, it is necessary to maintain your recorder regularly. The consumable parts in a network disk recorder are the followings.

HDD Unit / cooling fan / built-in backup battery / damper rubber for fixing HDDs. (Please note that the applied parts varies depending on the models.)

Maintenance including parts exchange leads to the stable operation of your recorder.

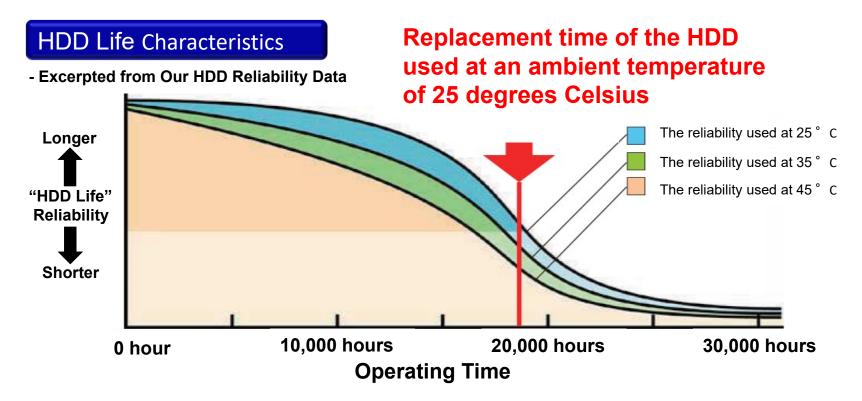

#### Estimated Replacement Period of an HDD

Although the HDD life differs depending on the usage environment, an HDD is certainly a consumable device. When used at an ambient temperature of 25 degrees Celsius, errors such as write error may start to occur at the operating time of 20,000 hours. When it reaches over 30,000 hours, the HDD can die due to the deterioration of the read/ write head or the motor in it. Keep the ambient temperature under 25 degrees Celsius and replace HDDs at the point of 18,000 hours for your secure data management.

Please note that this is our estimated replacement period for reference and does not guarantee the life of your HDDs.

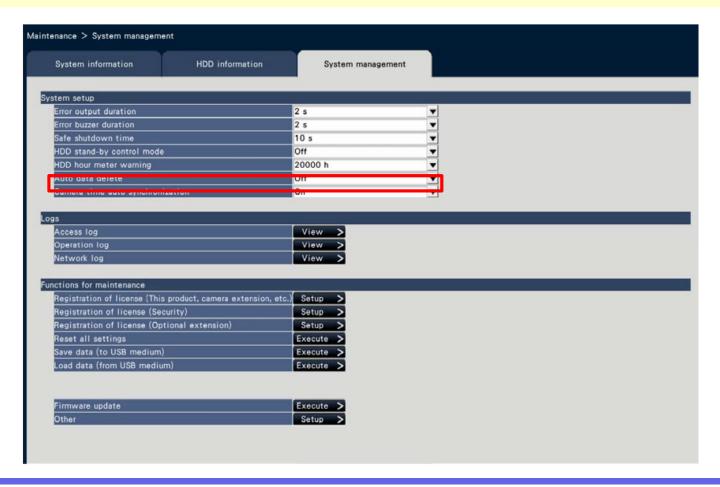

Hour Meter: Approx. 9,000h = 1 year, : Approx. 18.000h = 2 years, Approx. 26,000h = 3 years, Approx. 35,000h = 3 years, Approx. 44,000h = 5 years

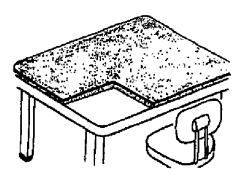

#### HDD hour meter warning

HDD hour meter warning is a function that performs a warning when the operating time of an HDD reaches a specified level. With default setting, it performs a warning at the operating time of 20,000 hours where errors such as write error can start to occur. As described on the previous slide, the reliability of an HDD starts to decrease rapidly before the operating time reaches 20,000 hours. Therefore we recommend to replace HDDs at the point of 18,000 hours to prevent possible failures and manage data securely.

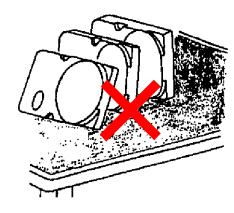

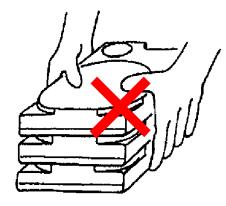

#### To Prevent HDD troubles ....

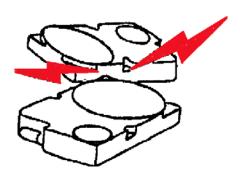

Use Antistatic & shock prevention mat

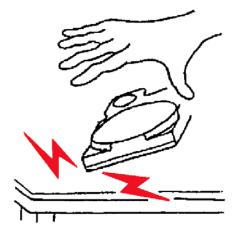

Do not place vertically

Do not stack

Do not hit

Do not drop

Do not use a regular electric screwdriver
