- WV-ASC970 Server Software (System Software)
- WV-ASC970 Admin Console
- Admin Console sample database
- Operating Instructions
- Admin Console User's Guide
- Utility Operation Guide
- "Readme" file

Hardware Requirements

Server PC

Panasonic Corporation recommends the certain server model that we have verified to work the system software properly. Please see "Readme" file. We do not guarantee all functions of the server software in case of other server model.

Followings are minimum requirements for Server PC.

OS:	RedHat Enterprise Linux 5 server (32bit), RedHat Enterprise Linux 6 server (32bit) and RedHat Enterprise Linux 7 server (64bit)
CPU:	Xeon 2.33 GHz
Memory:	2 GB
HDD:	160 GB
Ethernet Port:	2(3) x 100/1000 Mbps
Serial Port:	1 x RS232C Port
CD-ROM Drive:	Necessary to install this software

Admin Console PC

Note:

- As with any PC applications that must be reliable, Admin Console should be the primary program running on the computer it is installed on. This should be the major use of that computer.
-

Minimum Hardware Requirements

- PC with an Intel® Pentium® 4 processor 3.0 GHz
- 512 MB memory
- 200 MB free hard drive space
- 10/100 Mbps Ethernet network interface card

Minimum Video Display Setting Requirements

- 32 bit colors or higher
- 1024 x 768 resolution

Operating System Requirements

- Microsoft® Windows® 10 Pro Creators Update or later 32 bit (English/Chinese)
- Microsoft® Windows® 10 Pro Creators Update or later 64 bit (English/Chinese)
- Microsoft® Windows® 8.1 Professional 32 bit (English/Chinese)
- Microsoft® Windows® 8.1 Professional 64 bit (English/Chinese)
- Microsoft® Windows® 7 Professional SP1 32 bit (English/Chinese)
- Microsoft® Windows® 7 Professional SP1 64 bit (English/Chinese)

Software Installation

Server Software Installation

Note:

- Refer the Server PC original manual to turn on. To reboot the ServerPC, enter "reboot" command through the keyboard after login to the server. To shutdown, enter "poweroff" command.
-

1. Connect VGA monitor and Keyboard to the Server PC.
2. Login to the Server PC with **root** user.
3. Place the WV-ASC970 CD in the CD-ROM drive and wait for Linux to automatically start the installer. If CD auto run is not enabled, run "inststart.sh" in the root of the CD.
4. After the configuration finishes, you can see the "**Software Installation has been completed**" message on the monitor.
5. Reboot Server PC.

Admin Console Software Installation

Note:

- The WV-ASC970 Admin Console is used to define the database configuration for an individual Server PC.
 - If the previous version of WV-ASC970 Admin Console has been installed, be sure to uninstall it first.
-

1. Connect a PC to the Server PC through the Ethernet cable.
 2. Place the WV-ASC970 CD in the CD-ROM drive and wait for Windows® to automatically start the System Server Installer. If CD auto run is not enabled, run "**SystemMenu.exe**" in the root of the CD.
 3. Select **WV-ASC970 Admin Console** from the installation menu that appears.
 4. The installation will be started. Follow the instructions to complete the install.
-

Note:

- During the Admin Console connect the Server PC and available communication, you can Shutdown or Reboot the server through the Admin Console.
-

Launching the software

Refer to the operating instructions (Help file) of the WV-ASC970 License Management Tool for how to launch WV-ASE901, WV-ASE902 and WV-ASE231.

Important:

- When using WV-ASE901, WV-ASE902 and WV-ASE231, be sure to register the "Registration Key". Refer to the Activation Key Card for further information about how to obtain the "Registration Key".
-

Uninstalling Admin Console

Administration Console can be uninstalled by using **Add/Remove Programs** on **Control Panel**.

Database Configuration

It is now necessary to enter information on Server PC by using WV-ASC970 Admin Console. This information includes the Domain, Components and Automates. Refer to the WV-ASC970 Admin Console User's Guide for details to enter the required information.

System Initialization ("sys.ini" file) Configuration

The last step is to edit the "sys.ini" file that defines several configurations includes IP Address, Interface number, OSD property and system Unit number. Refer to the WV-ASC970 Operating Instructions for details to enter the required information. Following is a procedure to edit the "sys.ini" file.

1. Log in to Admin Console.
2. Choose **Domain | CPU Units** from the main Menu.
3. Choose **Sys** tab.
4. From the drop-down menu under the **SYS Transfer** section, select the Unit that has the "sys.ini" file you wish to modify.
5. Click the **GET From CPU** button to retrieve the "sys.ini" file.
Click anywhere in text that appears to begin editing.
6. Edit each section in "sys.ini" file.
7. Click **Save** button.
8. Click the **PUT To CPU** button to send the changes to the Unit.
9. Reboot the Server PC.

Sample Database and "sys.ini" file Restore

This CD-ROM includes sample databases and sample "sys.ini" files that are configured based on "Standard System", "Hybrid System" and "Multiple System Domain" system described in Operating Instructions. To restore the database and "sys.ini" file, refer to Admin Console User's Guide.
