NOTE:

- When keystone correction is used, the image is corrected in the direction that reduces its projected size.
- NOTE: When the fixed-focus lens ET-ELW03 is mounted, the optical lens shift function cannot be used.

**Calculation of the projection distance**

For a screen size different from the above, use the equation below to calculate the projection distance.

**Shift range**

Optical axis shift function allows to shift the position of a projected image as shown below.

- When the ET-ELW06 is mounted

- When the ET-ELW02/ELW04/ELS03/ELM01/ELT02/ELT03 is mounted

- When the ET-ELS02 is mounted

**Installable angle**

Install the projector at an angle within the range shown below.

**• Vertical direction**

The projector may be installed at a vertical angle of 360°.

**• Horizontal direction**

The projector may be installed at a horizontal angle of  $\pm 10^\circ$ .

**List of compatible signals**

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 15 kHz to 100 kHz (15 kHz to 120 kHz for RGB signals), vertical scanning frequencies of 24 Hz to 120 Hz (48 Hz to 120 Hz for RGB signals), and a dot clock of 162 MHz maximum (230 MHz maximum for RGB signals) can be input.

**NOTE:** The native resolution of this projector is 1,024 × 768 pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.

1	-	NC	6	-	NC
2	TXD	Transmitted data	7	CTS	Connected internally
3	RXD	Received data	8	RTS	Connected internally

**Communication conditions (factory setting)**

Signal level	RS-232C-compliant
Synchronization method	Start-stop synchronization
Baud rate	19,200 bps*
Parity	None
Character length	8 bits
Stop bit	1 bit
X parameter	None
S parameter	None

\* 9,600 bps when "AMX D.D." is set to ON.

**Basic format**

Transmission from the computer begins with STX, then the ID, command, parameter, and ETX are sent in this order. Add parameters according to the details of control.

**ID designator:**  
 01 to 06: Projector ID number  
 ZZ: All units (ID ALL)

**NOTE:** STX and ETX are character codes. Expressed in hexidecimals, STX is 02 and ETX is 03.

**CAUTION**

- It may not be possible to send or receive commands for about 10 to 60 seconds when the lamp is first turned on. If this occurs, wait for 60 seconds, then try sending or receiving again.
- When sending multiple commands, be sure to wait for at least 0.5 second after receiving a response from the projector before sending the next command.
- Additional time is sometimes required for response due to processing inside the projector. Set the time-out period for command response to 10 seconds or more.
- When using two or more units, set different IDs for each unit.

**NOTE: If a wrong command is received, the projector will send an ER401 or ER402 command to the computer.**

**Command example**

To set the shutter function on, send the command as shown below.

```

STX   ADZZ ; OSH : 1   ETX
  |         |         |         |         |

```

**NOTE: When sending commands without parameters, a colon (:) is not necessary.**

**Notes on projector placement and operation**

The projector uses a high-wattage lamp that becomes very hot during operation. Please observe the following precautions.

1. Make sure there is an unobstructed space of 1,000 mm (3 feet 3 inches) or more around the projector.
2. Do not stack projector units directly on top of one another for the purpose of multiple (stacked) projection. When stacking projector units, be sure to provide the amount of space indicated below between them.
3. Make sure that nothing blocks the projector's air intake and exhaust openings. Also, install the projector so that cool or hot air from other air conditioning equipment does not flow directly toward the projector's air intake or exhaust openings.
4. Do not install the projector in an enclosed space. If it is necessary to install it in an enclosed space, add a separate ventilation system. If ventilation is insufficient, hot air will accumulate at the intake opening. This may cause the projector's protective circuit to interrupt projector operation.
5. If the projector is installed in an enclosed space, ensure that the projector's intake and exhaust openings are not blocked. Take particular care to ensure that hot air from the exhaust openings is not sucked into the intake openings.

**Direction of air intake and exhaust**

**Operating the projector continuously**

1. If the projector is to be operated continuously 24 hours, use the lamp relay mode. The projector cannot be operated continuously 24 hours in dual-lamp mode.
2. The lamp replacement cycle duration becomes shorter if the projector is operated repeatedly for short periods.
