## Calculation of the projection distance

For a screen size different from the above, use the equation below to calculate the projection distance.

Aspect ratio 16:10
$\mathrm{L}(\mathrm{m})=$ (diagonal screen size in inches) $\times 0.0104-0.0339$

Aspect ratio 16:9
$\mathrm{L}(\mathrm{m})=$ (diagonal screen size in inches) $\times 0.0106-0.0339$

Aspect ratio 4:3
$\mathrm{L}(\mathrm{m})=$ (diagonal screen size in inches) $\times 0.0117-0.0339$

NOTE:
Distances calculated with the above equations will include a slight error.

## List of compatible signals

The signals that can be input to this projector are shown in the table below. Horizontal scanning frequencies of 15 kHz to 91 kHz , vertical scanning frequencies of 24 Hz to 85 Hz , and a dot clock of 162 MHz maximum can be input.

NOTE: The native resolution of this projector is $1,280 \times 800$ pixels. If the display resolution of the input signal is different from the native resolution, image compression or expansion will be used to convert the input signal to a level within the native resolution.
