### AI-VMD/AI People Counting with the 360-degree fisheye camera

AI Video Motion Detection

• AI differentiates between vehicles and people, detecting and sending warning notifications when an intruder enters a specified area.

• **Intruder detection:**
Issues an alarm when a moving object enters a specified area.

• **Cross Line detection:**
Issues an alarm when an object moving in the specified direction crosses a specified threshold.

• **Loitering detection:**
Issues an alarm when a moving object enters a specified area and stays there for a specified amount of time.

People Counting

• **Cross Line Counting:**
Counts the number of people moving in a specified direction and cross a specified threshold.

• **Area Counting(Queue Management):**
Counts the number of people in the set area.
Cross Line Counting

Area Counting

Heat map

• Heat mapping provides statistical information about traffic flow and keeps counts for people passing through and loitering in the area.

Passing

Loitering

Occupancy detection

• The network camera uses its AI engine to detect congestion, providing data that can be used to direct visitor traffic flow in advance or help staff work more efficiently.

### AI Privacy Guard for 360-degree fisheye

AI Privacy Guard

• AI can automatically mosaic faces and figures of people who are photographed to safeguard privacy and portrait rights.

i-PRO Active Guard

• The i-PRO Active Guard stores the best images and metadata captured by i-PRO network cameras, then collates this data with the watch list registered in the client software and issues an alarm when a match is found. The server does not require expensive hardware because i-PRO network cameras handle the advanced processing. The server can even be installed on the same hardware as the VMS. The system comprises the i-PRO Active Guard, the AI application installed on i-PRO network cameras utilizing AI engines, and i-PRO Active Guard Plug-in software for the VMS client.
